Project Mission & Vision

- Mission
  - To help people make informed decisions, and give informed consent, about nursing home care.

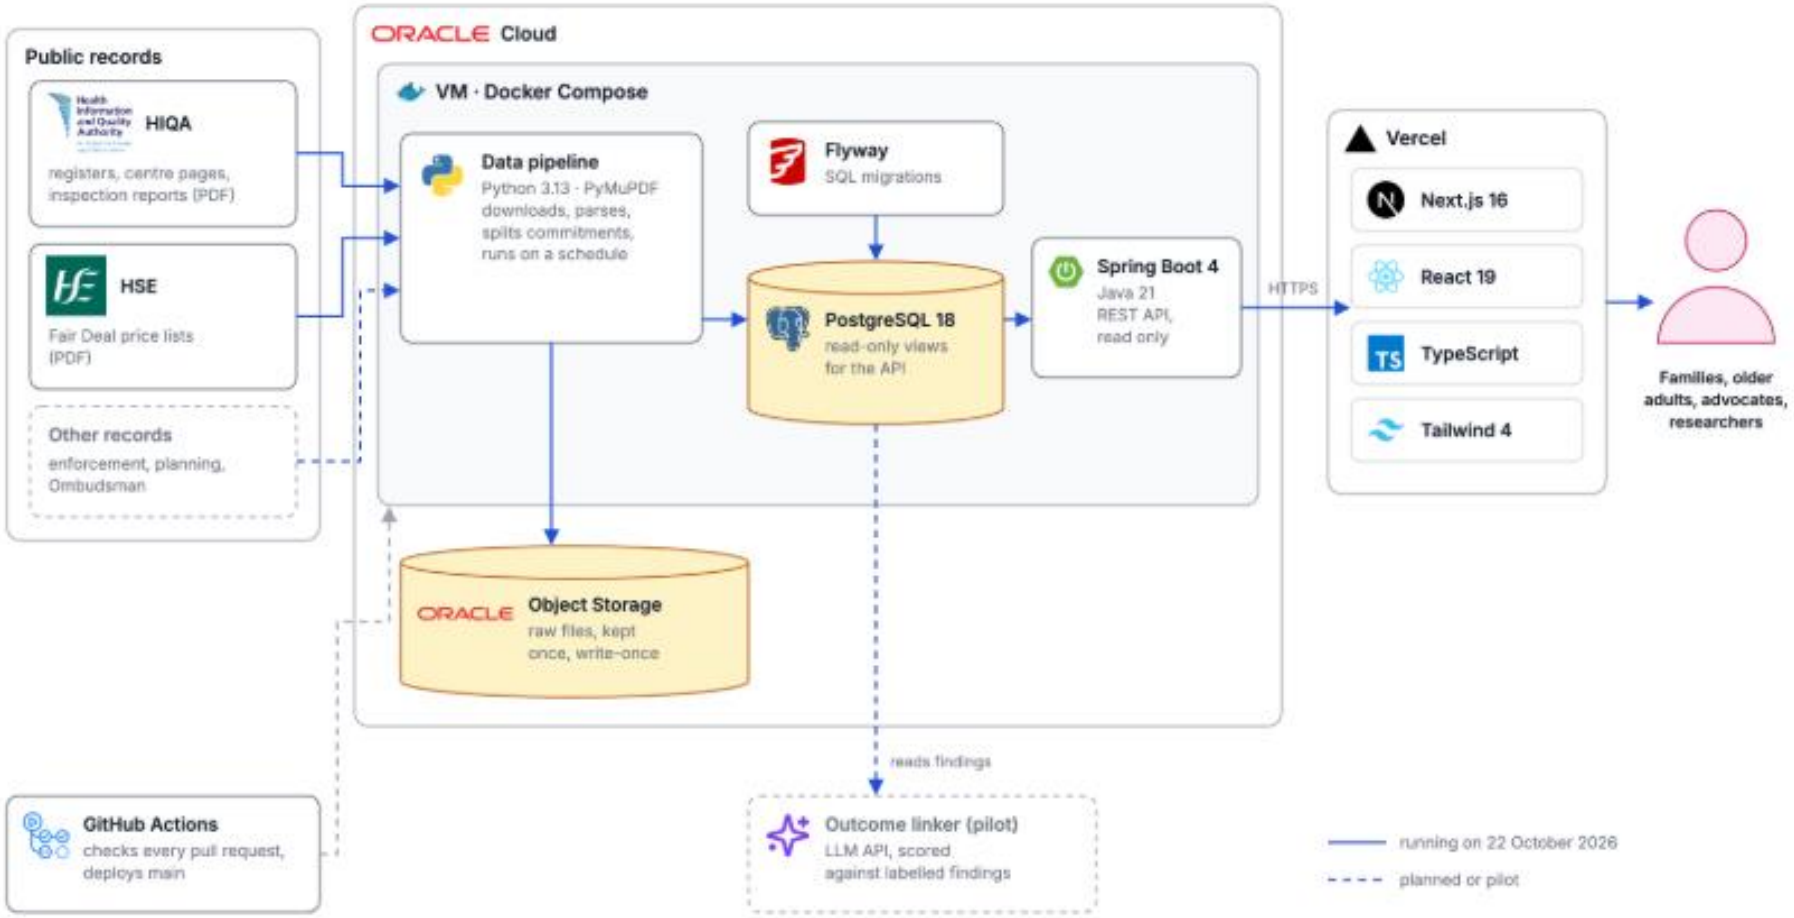

- Vision
  - As Ireland's older population grows, more families will face this choice. We want every one of them to make it informed and prepared.

Project Goals

- Who it is for?
  - Families looking for a nursing home.
  - Older people deciding for themselves.
  - Advocates and researchers
- Why the need?
  - People should be able to choose even when the time is short.
- Project Aim
  - To help families and older adults understand the process and what to know before choosing a home.

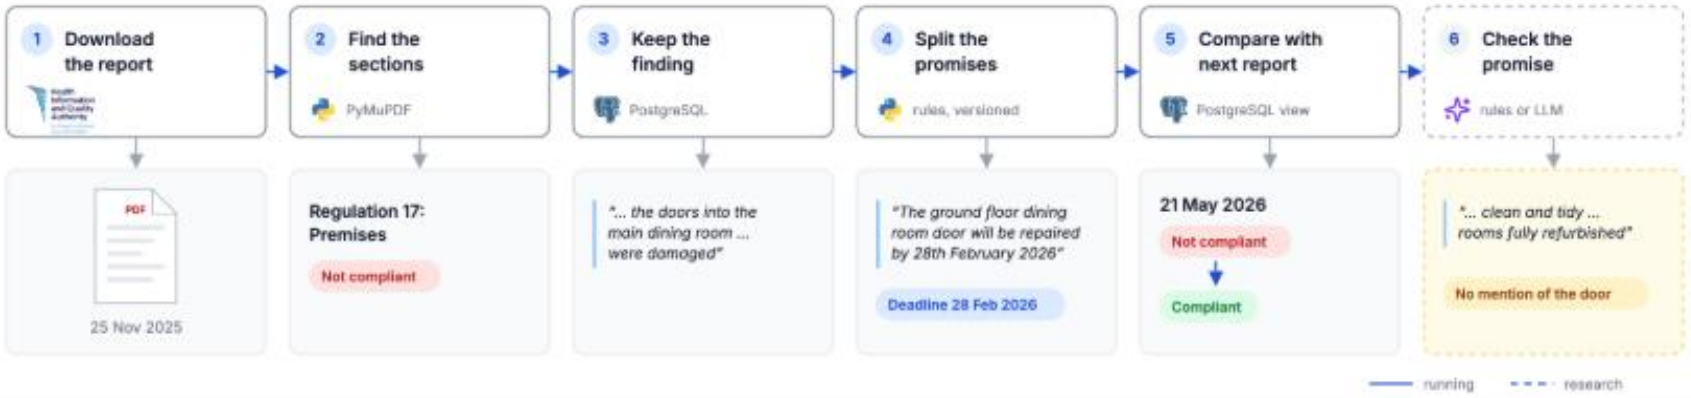

Technology Stack

- **Pipeline**
  - Python 3.13 with PyMuPDF and psycopg. CSV mapping files drive the parser. Every extraction carries a version.
- **Data**
  - PostgreSQL 18 with Flyway migrations. Derived tables are append-only. The API reads views only. Raw files sit in Oracle Object Storage, write-once.
- **API and site**
  - Spring Boot 4 on Java 21: a read-only REST API with OpenAPI. Next.js 16, React 19, TypeScript and Tailwind CSS 4 on Vercel, rendered on the server.
- **Delivery**
  - One Oracle Cloud VM with Docker Compose. GitHub Actions checks every pull request and deploys on merge. LLM pilots (Claude, GPT-4o-mini) are research only until they score well against human labels.

Data Stack

- **HIQA register**
  - A CSV export every day, 546 centres.
- **HIQA inspection reports**
  - A weekly check of every centre page. 2,204 PDFs stored, 1,969 standard reports parsed: judgments per regulation, compliance-plan rows, text per regulation, and about 38,000 commitments.
- **HSE price lists**
  - Two PDFs: 411 private and voluntary homes, 115 public homes. Found on the Fair Deal page and loaded weekly
- **Storage**
  - Every file is kept once under its content hash, with a write-once copy in object storage. A file already loaded is skipped, so every run is safe to repeat.
- **Access**
  - All three sources are public web pages. No logins or API keys are needed.

Evaluation

- **General User Evaluation**
  - Each lists three things they liked, three they disliked and three they missed.
- **Public Launch**
  - A visitor survey on a five-point scale, with questions based on Nielsen's usability heuristics. We report the median, the mode and the share who agree, grouped by heuristic.
- **End-User Interviews**
  - hematic analysis (Braun and Clarke) answers four questions: is the site usable, does it stay useful as reports arrive, is it accessible, is it accurate.
- **Data: four numbers, each reproducible with one command**
  - Commitment splitter against labelled commitments: regulation, text span, date, page.
  - Outcome linker, rules and LLM, against labelled outcomes: 5 report pairs, 43 findings. The pilot gave 0 invalid outputs for under $0.10.
  - Amenities extraction against an 18-home gold set: nine fields, scored as match, missed or invented.
  - National re-assessment figures, with their coverage and bias stated.

Ontology Research

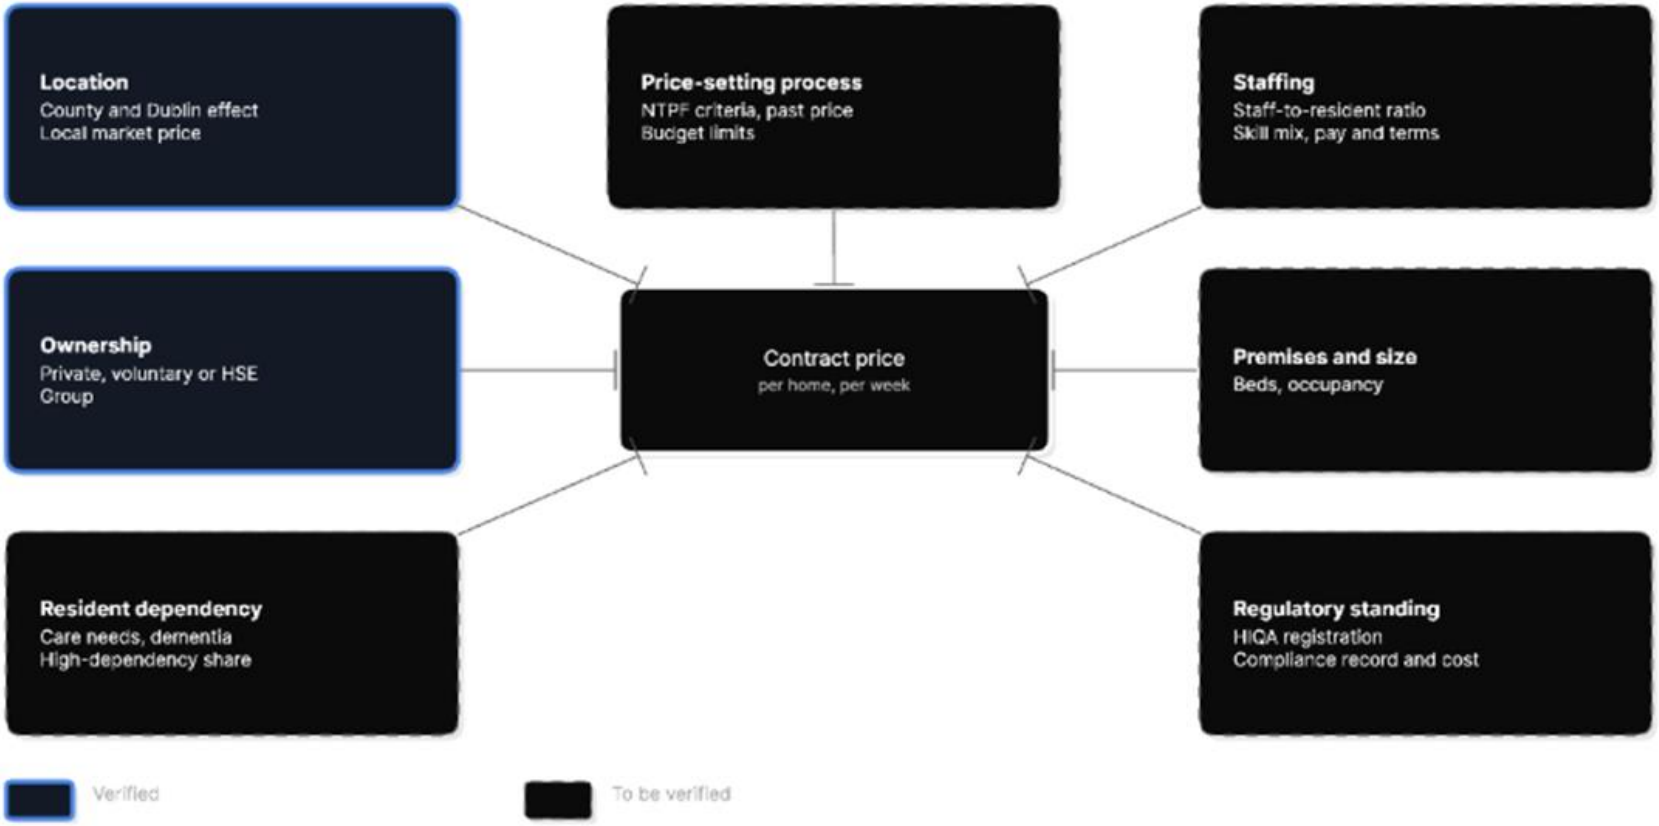

What Drives Nursing Home Contract Prices?

- Factors to test
  - Location and Care Types
  - Type of home: private, voluntary or public
  - Registered capacity
  - Facilities and services
- What the HSE data shows
  - Private and voluntary (411 homes): €1,192 to €1,508 a week, median €1,287
  - Public (115 homes): €1,193 to €2,902 a week, median €1,966 (one outlier at €342 excluded)
  - Dublin averages about €1,408 a week, compared with €1,276 outside Dublin
- HIQA reports (16 reviewed, 2023 to 2026)
  - Recurring inspection areas: premises, infection control, care planning, food and nutrition
  - These describe homes but have not been linked to price

Predictive Modelling

Can We Predict Regulation Failures?

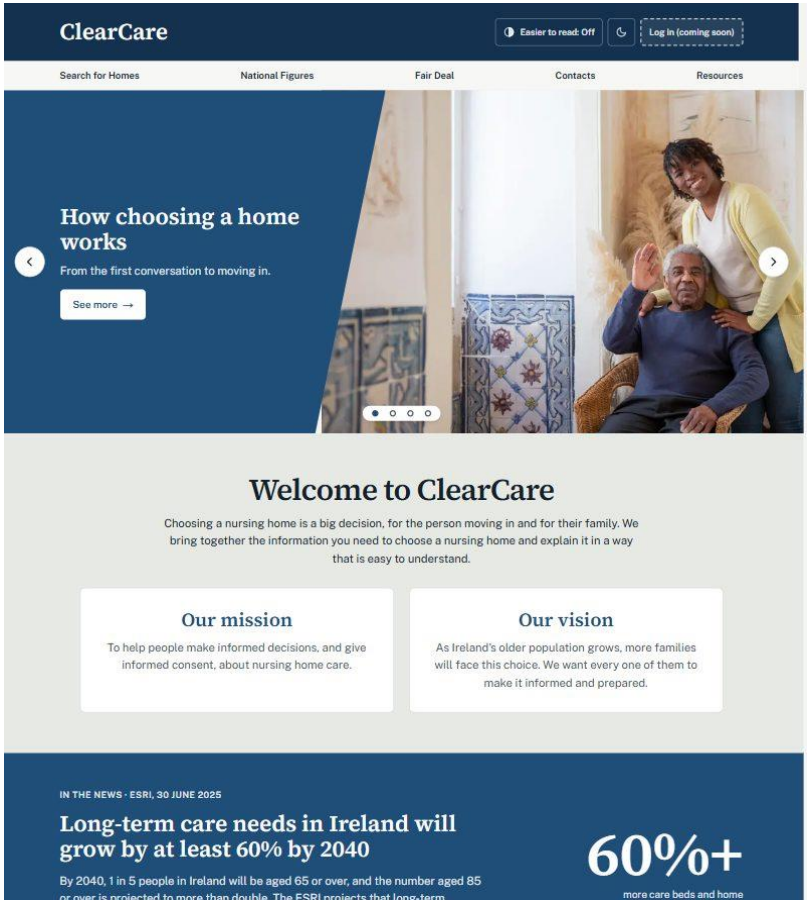

- What we have
  - HIQA judgments: Compliant, Substantially Compliant, Not Compliant
  - Original wording and page references kept, so every finding traces back to its report
- What we could analyse
  - Which regulations are most often non-compliant
  - Whether an earlier judgment is linked to a later outcome
- What's needed first
  - Validate the extracted judgments
  - Account for differences in what each inspection covered
  - Test against suitable data before estimating any probability

How choosing a home works
From the first conversation to moving in.
See more →
Welcome to ClearCare
Choosing a nursing home is a big decision, for the person moving in and for their family. We bring together the information you need to choose a nursing home and explain it in a way that is easy to understand.
Our mission
To help people make informed decisions, and give informed consent, about nursing home care.
Our vision
As Ireland's older population grows, more families will face this choice. We want every one of them to make it informed and prepared.
IN THE NEWS · ESRI, 30 JUNE 2025
Long-term care needs in Ireland will grow by at least 60% by 2040
By 2040, 1 in 5 people in Ireland will be aged 65 or over, and the number aged 85
60%+
more care beds and home

Immediate Next Steps & Project Roadmap

- **Immediate**
  - Labelling reports, timed, and run the LLM pilot on them.
  - Build the promise trail on the centre page.
  - Grid Comparison
  - Geocoding
  - Alerts

- **Biggest Challenges**
  - Knowing whether a promise was kept.
  - Gathering end-users for evaluation.
