MSc Group 2 Project

ClearCare

Week 8 update · 30 Oct–5 Nov 2026

A record of

What inspectors found.

What the provider promised.

Whether the next inspection **found it fixed.**

Promise Trails

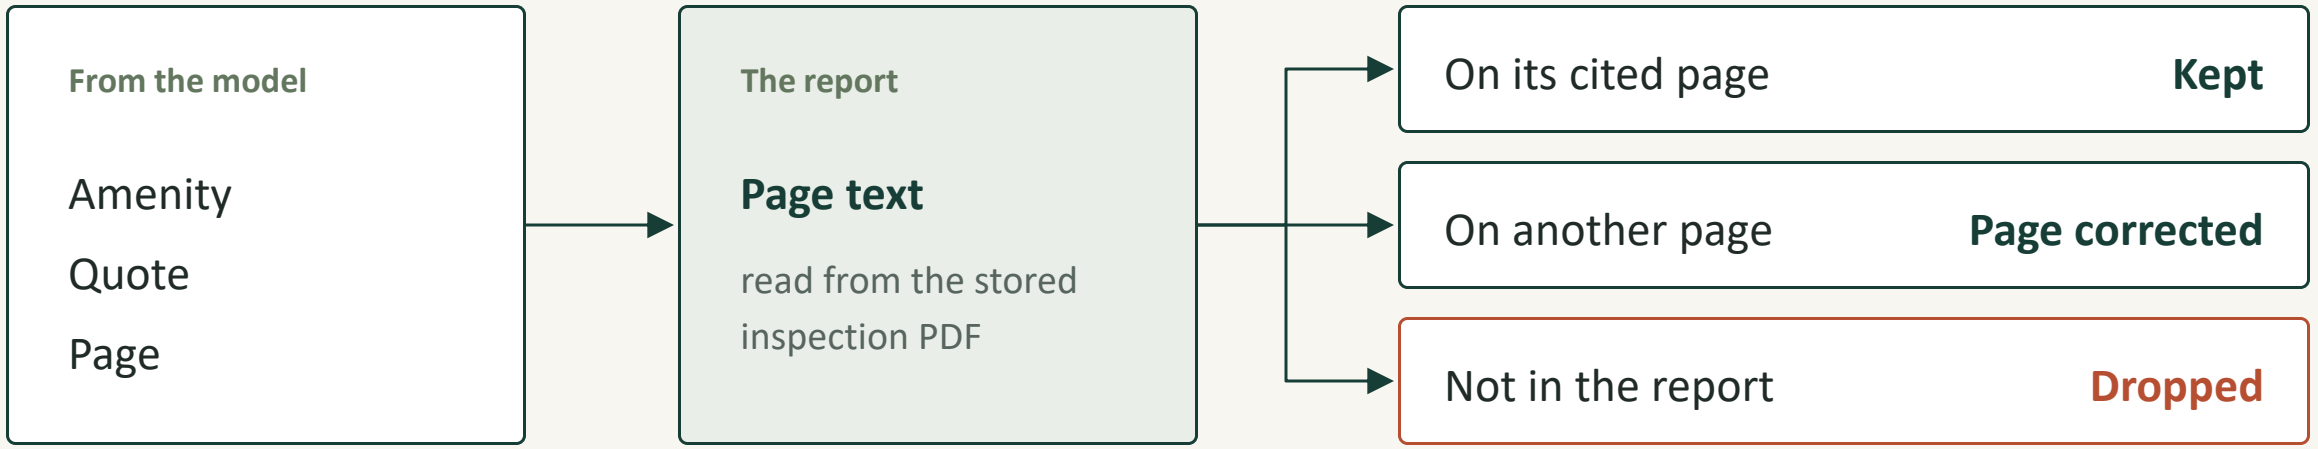

Each finding, followed to its next judgment

Later reports	Every later report is searched, not only the next one.
Same day	Two reports on one day: the order is shown as unknown.
Report text	The page quotes the report and links to its page.

Every quote is checked against the report

The model picks the amenities. Each quote must be the report's own words.

User Evaluation: Phase 2

Survey

MS Forms

Community outreach

Sprint 9 Goal

User Evaluation: Phase 3 Planning

Find people

- People with experience
- People currently going through it
- Elderly people, with the **Easier to Read** mode
- Past interviewees

Research papers

Find relevant research papers.

- Reach out to subject matter experts
- Reach out to paper authors

Code Development

Continuous UX/UI and additional features.

Amenities

Goal: Extract the care types, room types, activities and facilities each nursing home provides, so users can filter and compare homes.

Workflow

- **HIQA report PDF → Extract readable text → LLM maps details to V2 categories → Save JSON → Load into PostgreSQL → API → Website**

- The LLM (Claude Haiku 5.5) extracts details from the reports and maps them to **care types, room types, activities and facilities**.
- Each result includes a supporting quote and PDF page number.

Scope

- **Scope:** nursing homes across all 26 counties of Ireland, using available HIQA inspection reports.

Early stages, Next Steps

- We started with **V1**, then moved to **V2** to standardize the categories and make each result traceable to its report evidence.
- V2 groups amenities into:
  - **Care types:** the kinds of care the home provides.
  - **Room types:** the accommodation options available.
  - **Activities:** activities residents can take part in.
  - **Facilities:** features and amenities available at the home.
- Extraction and loading are currently manual. **Scheduled processing** is a future step.
- Complete the revised **V2 human-labelled gold set**, then evaluate the V2 results against it.
- V1 was not evaluated because the team moved to V2 before evaluation was completed.

User Accounts, User Preferences and Pipeline Migration

User Accounts

- Production sign-in is in place
- New Terraform stack for the production Cognito user pool, wired into the live deployment
- Sign-out now ends the Cognito session too
- Cognito managed-login v2 settings now live in the repo

User Preferences

- Users filters and choices stored against the account. A signed-in visitor's county, order and ticked filters come back on a later visit, from user's saved preferences.
- Works across platform and devices for the same user.

Pipeline Migration

- Migration of pipeline to AWS is now complete and our entire stack runs fully on AWS.

Next Sprint

UX/UI	Continuous evaluation and development.
Geocoding	Locate each nursing home.
Promise outcomes	What later reports say about each promise.
User alerts	An email when a followed home gets a new report.
Pictures	Source pictures of the nursing homes.
Research questions	Continue.
Logo	Across the site.
