MSc Group 2 Project

ClearCare

Week 5 update

A record of

What inspectors found.

What the provider promised.

Whether the next inspection **found it fixed.**

8–15 Oct

This week in one line

545
centres

2,204
PDFs

1,969
reports loaded

Every HIQA nursing-home inspection report in the country is downloaded, parsed and in the database.

The site shows them: each home's page has its inspection history, one row per regulation, one column per inspection.

The pipeline runs by itself on the server: register daily, reports weekly.

The contacts & resources page are live, with draft guides and a flowchart of how a family chooses a home.

Twila: the prod site

Centre page CCARE-89	Shows **real inspection reports** from the API: judgment per regulation across inspections, newest inspection first, “not assessed” visible.
New pages CCARE-53, 54, 60, 61	Contacts (advocacies, Dementia Ireland, Fair Deal, HIQA, etc) and **draft** guides on choosing a home and reading an inspection report. *The Fair Deal guide is not live yet.*
Fixes CCARE-78, 79, 80	Double search bar, incomplete grid results when searching for a home.
Adult-centred user design	Currently reading WCAG 2.2, WAI and other public guides.

Likun: the pipeline runs itself

Deploys CCARE-19	Every merge to main deploys to the server from CI.
Download 13 Oct	Downloaded every inspection report in the country: 545 centres, 2,204 PDFs.
Docker Compose CCARE-87, 88	One project with the database and the API: loads the register daily, looks for new reports weekly, uploads every file to object storage and loads the parsed reports into the database. The old systemd timers are gone.
Cut-over 15 Oct	The server ingested **all 1,969 standard reports in 1 h 43 min**: 26,876 regulation judgments, 15,049 compliance-plan items.
Reviews CCARE-34	Six pull requests merged; reviewed the parser with a national run before it merged.

Likun: Past findings predict the next inspection

Dublin, 399 standard reports, 103 centres, 296 inspection pairs, about 9 months apart

Judged last time → next time	Compliant	Substantially compliant	Not compliant
Compliant	67%	24%	**9%**
Substantially compliant	46%	39%	15%
Not compliant	33%	32%	**36%**

By regulation
not fully compliant next time

Governance and management: 81% after a finding, 50% without
Residents' rights: 52% and 53%, no difference

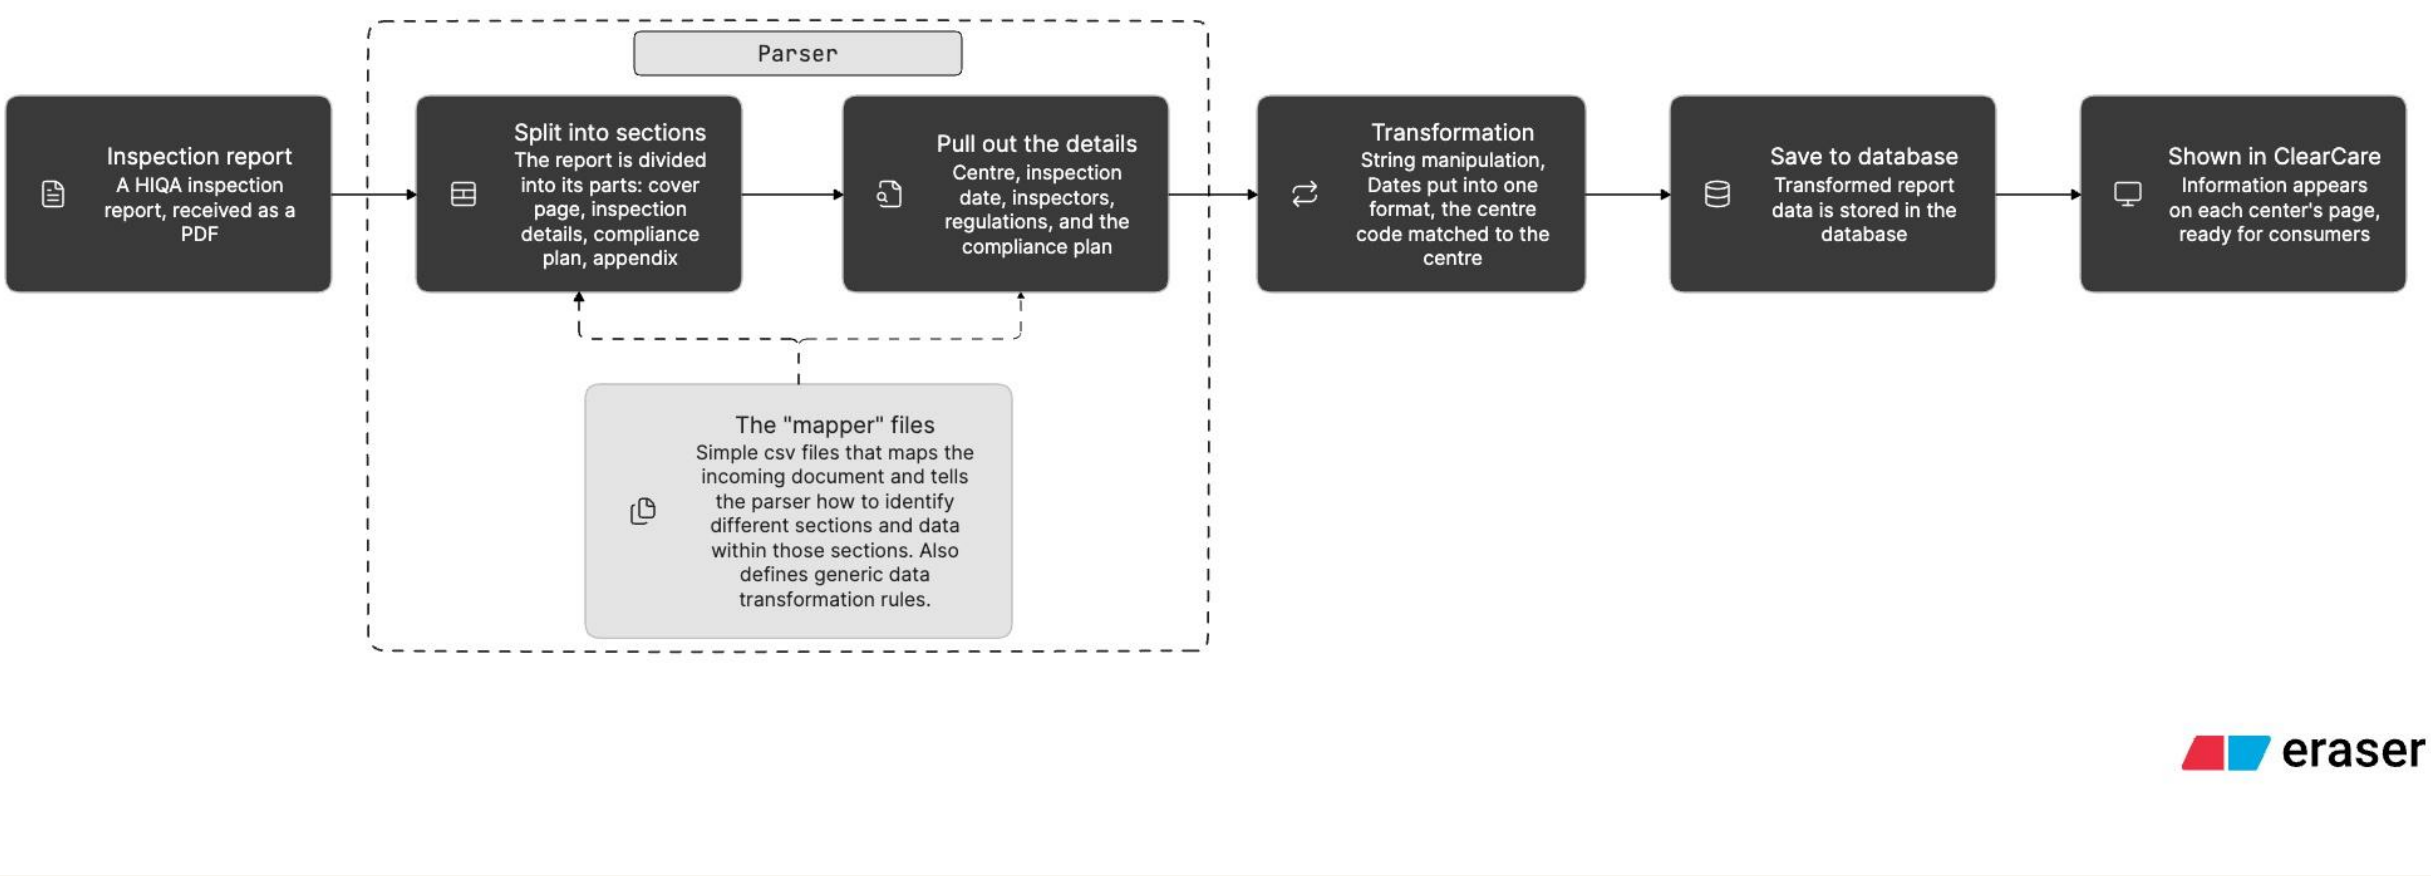

Limits — Only regulations HIQA assessed again. Shows what happened, not why.

Next — National numbers, then each finding linked to the provider's promise.

Niwash: Parsing the reports end to end

Parser	Section-aware: cover fields, inspectors, each regulation with its judgment (Appendix 1), the compliance plan (Section 2). Handles page breaks and tables that run over pages.
Batch ingestion	Parsed reports transformed and loaded into PostgreSQL.
Migrations	The report tables and the views the API reads.
Endpoints	A centre’s reports, and one report in full with inspectors, regulations and compliance items.
Coverage	Reads **1,969 of 2,204 reports**. The 235 it does not read are thematic and National Standards reports, which have a different layout.

Niwash: Process flow diagram for parsing

Waseel: how to read a HIQA report

Reading guide
CCARE-56

A guide on how to read a HIQA inspection report, from 16 hand-read reports. Merged 15 Oct, **now the text of the site's guide**.

1. Start with the basics
2. Read the evidence behind each judgment
3. Look for repeat findings
4. Keep the provider's plan separate from the inspector's findings

Personas and retros
CCARE-52, 41, 42

Second set of user personas; week 3 and week 4 retrospectives.

Audit
CCARE-48

Audit of the hand-read reports, in review.

Aswin: amenities from the reports

User checklist
CCARE-55

User “questions to ask yourself” checklist that became the choosing-a-home guide.

Fair Deal guide
CCARE-86

In review.

Amenities extraction

A three-stage Python pipeline. Each report’s text goes once to GPT-4o-mini with a fixed schema, so every home gets the same fields:

care types · room types · outdoor space · activities

Dublin first; a full run costs under €1; re-runnable and extendable to other counties.

Validation

Spot-check extracted fields against the PDF.

About the designated centre

The following information has been submitted by the registered provider and describes the service they provide.

Aclare House occupies a prime location, a short distance from the centre of Dun Laoghaire. It has views overlooking Dun Laoghaire Harbour and has a large landscaped enclosed garden. It can accommodate 27 residents, both male and female above the age of 18. The centre caters for a range of needs, from low to maximum dependency and provides short term care, long term care, convalescence care and respite care.

The centre comprises of nine single rooms some of which are en-suite and nine twin rooms, some of which are en-suite. Other accommodation includes a computer area, assisted bathrooms, showers rooms, designated smoking area, staff facilities, kitchen, laundry, sluice room. There are communal areas for use by residents such as the lounge, dining room, conservatory and visitor's room.

Next week

Twila	Continued research on Adult-centred User Design · initial user evaluation · continuous front-end development
Likun	National numbers for the research question · store the “About the designated centre” paragraph the parser already finds, as the source for amenities
Niwash	Parser hardening · thematic inspection reports · maximum contract prices per home
Waseel	Fixes to the audit report · a gold set to measure how accurately ClearCare extracts information from reports
Aswin	Validate the amenities extraction against the source PDFs · connect the results to the site
